Orthotic Design and Fabrication for the Upper Extremity  Katherine Schofield, Deborah Schwartz, 2019

Orthotic Design and Fabrication for the Upper Extremity: A Practical Guide by Drs. Katherine Schofield and Deborah Schwartz is a unique guide that illustrates orthotic design and fabrication in a clear step-by-step fashion by presenting printed textual material along with instructional videos. The first chapters lay the foundation for orthotic design and detail the anatomical knowledge and background information that is required before molding orthoses on clients. Each chapter explores a specific part of the upper extremity, describes several common clinical diagnoses, and highlights typical orthoses that might be utilized to immobilize and protect it. Together, these chapters communicate core, foundational knowledge for the use of orthoses as an intervention in occupational therapy practice. The instructional videos also emphasize the application of biomechanical, anatomic, and clinical constructs in orthotic design, fabrication, and evaluation. The textbook and video content work together enabling students and entry-level practitioners to learn with visual and versatile resources. University faculty members will gain access to ample activities and exercises to augment their classroom and laboratory teaching. This allows for more efficient use of time and appeals to the learning styles of current and future students. This text includes:

- Chapters devoted to specific type of orthosis for parts of the upper extremity linked to step-by-step instructional videos
- Case studies to promote a grasp of the knowledge and application to the development of clinical reasoning skills
- Multiple choice and short answer review questions and activities for most chapters
- Presentation of current evidence to support the use of the specific orthoses in clinical practice
- Patterns that can be replicated and check out sheets to critique each orthosis

The combination of text materials and instructional video material makes Orthotic Design and Fabrication for the Upper Extremity: A Practical Guide a uniquely valuable resource for occupational therapy students, new graduates, and novice clinicians.

Hand Splinting / Orthotic Intervention  Judith Wilton, 2014-11-01

Hand splinting/orthotic fabrication is a vital intervention used by occupational and physiotherapists to restore optimum hand function in patients/clients whose upper limbs have been affected by congenital conditions, disease or trauma. This practical book, designed for therapists and students approaches
hand splinting/orthotic fabrication from the perspective of the purpose of the intervention. Detailed information describes how orthoses can immobilize tissues to achieve healing or functional objectives, mobilize tissues to restore joint motion, and restrict tissues to gain function. Armed with knowledge of orthosis function and purpose, and practical procedures and techniques, hand and upper limb therapists will be able to fabricate orthoses for a wide range of diagnoses. Features of this book include: - Over 150 illustrations of orthoses and patterns. - Comprehensive index listing orthoses by region/joint and purpose of intervention - immobilization, mobilization, restriction and torque transmission. - Elbow, forearm, wrist, finger and thumb chapters with a consistent easy to follow approach to orthotic intervention options, highlighting anatomical principles and latest literature. - Biomechanical, technical and practical information essential to design and fabrication of upper limb orthoses. - Emphasis on clinical reasoning and patient/client contribution in orthotic intervention. - Detailed illustrations and pattern descriptions of all orthoses. - Step by step instructions for orthosis fabrication. - Specific chapter on orthotic and casting interventions for neurological dysfunction addressing current literature, classification of hand deformity and dysfunction, and intervention options. - Use of nomenclature consistent with the Australian Hand Therapy Association Splint/Orthosis Classification.

Upper Extremity Casting Leanne Banes Kelly, 1996

Cerebral Palsy Freeman Miller, Steven J. Bachrach, 2006-05-08 When a child has a health problem, parents want answers. But when a child has cerebral palsy, the answers don’t come quickly. A diagnosis of this complex group of chronic conditions affecting movement and coordination is difficult to make and is typically delayed until the child is eighteen months old. Although the condition may be mild or severe, even general predictions about long-term prognosis seldom come before the child's second birthday. Written by a team of experts associated with the Cerebral Palsy Program at the Alfred I. duPont Hospital for Children, this authoritative resource provides parents and families with vital information that can help them cope with uncertainty. Thoroughly updated and revised to incorporate the latest medical advances, the second edition is a comprehensive guide to cerebral palsy. The book is organized into three parts. In the first, the authors describe specific patterns of involvement (hemiplegia, diplegia, quadriplegia), explain the medical and psychosocial implications of these conditions, and tell parents how to be effective advocates for their child. In the second part, the authors provide a wealth of practical advice about caregiving from nutrition to mobility. Part three features an extensive alphabetically arranged encyclopedia that defines and describes medical terms and diagnoses, medical and surgical procedures, and orthopedic and other assistive devices. Also included are lists of resources and recommended reading.

In addition, SSA considers assistive devices in its medical disability determination process and assessment of work capacity. The Promise of Assistive Technology to Enhance Activity and Work Participation provides an analysis of selected assistive products and technologies, including wheeled and seated mobility devices, upper-extremity prostheses, and products and technologies selected by the committee that pertain to hearing and to communication and speech in adults.
